SAP JOULE · CHEAT SHEET

What you need to get Joule working in your SAP landscape

A one-stop checklist for people new to SAP. Tick each box in order. The **Runbook** column points to the section of the full *SAP Joule Enablement Runbook* (v1.1, same folder) with the detailed steps.

0 Joule in one minute

Joule is SAP's AI assistant. A user types a question in an SAP app ("show my open purchase orders"), and Joule answers or opens the right app, using **that user's own permissions**. It needs five building blocks:

☐	You need...	In plain words / tip	Runbook
☐	**A licensed SAP cloud product**	Joule only works inside SAP products you pay for, e.g. S/4HANA Cloud, SuccessFactors, Concur	3
☐	**SAP BTP** (Business Technology Platform)	SAP's cloud platform where Joule itself runs	4, 7
☐	**SAP Cloud Identity Services** (IAS)	The single login for Joule and every SAP product. One for test, one for production	4.2, 7.4
☐	**SAP Build Work Zone**	SAP's launchpad service. Joule uses it to find the right app for the user	7.3
☐	**The Joule booster**	A guided wizard in BTP that switches Joule on and connects your products	7.8

1 Decide and license before anyone touches a system

☐	You need...	In plain words / tip	Runbook
☐	Licence for every SAP product that should get Joule	Check in **SAP for Me** (SAP's customer portal) → Portfolio & Products	3.1
☐	**Joule Base** confirmed for those products	Included with most SAP cloud subscriptions; confirm with your SAP account team	3.1
☐	**AI Units** budget, if you want Joule Agents	Prepaid credits for premium AI features; ask when they expire	3.1
☐	Setup route chosen: **SAP-managed** or **customer-managed**	SAP-managed = SAP does the platform work (default for new customers). Customer-managed = your team builds it on BTP	2.1
☐	Product list and order agreed	Start with one product; add others to the same Joule later	2.2
☐	On-premise or ECC in scope? Ask SAP first	Joule for these is new (2026) and depends on your contract	8.3

2 Line up the people and access

☐	You need...	In plain words / tip	Runbook
☐	SAP for Me administrator	Requests SAP-managed Joule and activates AI Units	5.1
☐	BTP global account administrator	Runs the booster and manages entitlements (what services you may use)	5.1
☐	Identity (IAS) administrator	Owns logins, user groups and trusted domains	5.1
☐	Administrator for each SAP product	Does the product-side switches (roles, permissions)	5.1
☐	Basis and network team (Private Edition / on-premise only)	Cloud Connector, certificates, firewall	5.1
☐	Test users with real business roles	At least one "allowed" and one "not allowed" user per product	11

3 Prepare SAP BTP customer-managed route; SAP does this for SAP-managed

☐	You need...	In plain words / tip	Runbook
☐	An **enterprise** BTP global account	A trial or free account is not enough	7.1
☐	A **subaccount** in a supported region, Cloud Foundry enabled	A subaccount is a workspace inside BTP. Keep it in the same region as IAS and Work Zone	7.1, 4.2
☐	**Entitlements** added: Joule, Work Zone (standard edition), Cloud Identity Services	Entitlements = permission to use a service in that subaccount	7.2
☐	**Work Zone, standard edition** subscribed in the same subaccount	Reuse an existing Work Zone if you already have one	7.3
☐	Product systems **registered** in BTP System Landscape	Only registered systems can be picked in the booster	7.7
☐	Booster run, formation status **Ready**	A formation is the group "Joule + your products" the booster creates	7.8
☐	**Role collections** created and assigned	The booster does NOT do this. Without it users never see Joule	7.9

4 Get identity right the #1 reason Joule fails

☐	You need...	In plain words / tip	Runbook
☐	**One IAS tenant** for Joule and all connected products (per tier)	Two different IAS tenants = two separate Joules that don't talk	4.2
☐	Every user has a **Global User ID**	The ID that must be identical for the same person in every SAP product	7.6
☐	BTP trusts IAS over **OpenID Connect** (not SAML)	The type of login trust between BTP and IAS	7.4
☐	IAS sends the **Global User ID** and the user's **groups**	Without groups, users get no Joule roles	7.6
☐	SAP's default login switched off for business users	So everyone signs in through your company login	7.4
☐	**Trusted domains** added in IAS, BTP and each product	Lets the product, IAS and Joule talk to each other in the browser	7.5
☐	**User provisioning** (IPS) syncs users and roles to Work Zone	Schedule it, keyed on the Global User ID, not e-mail	7.10

5 Switch Joule on in each product tick only the products you have

☐	You need...	In plain words / tip	Runbook
☐	**S/4HANA Cloud Public Edition**	Booster sets up the connection; add the Joule URL to Content Security Policy; give users the Joule plugin catalog	8.1
☐	**S/4HANA Cloud Private Edition (RISE)**	Release 2021+ (2023 FPS01 better); Cloud Connector; expose launchpad content; pass the user's identity to S/4HANA	8.2
☐	**SuccessFactors**	Grant "Access to Joule" in Manage Permission Roles; add the SuccessFactors domain in IAS	8.4
☐	**Concur / Ariba**	Booster with the product selected; Ariba also needs an OAuth app	8.5, 8.6
☐	**SAP Analytics Cloud / Datasphere**	Work Zone required; Joule permission or role; free OAuth slots	8.7, 8.8
☐	**IBP and others**	Follow the product's SAP Help integration page	8.9, 8.10

6 Optional extras only if you need them

☐	You need...	In plain words / tip	Runbook
☐	**Document grounding**: Joule answers from your own files	SharePoint, Google Drive or SAP Document Management; keep personal data out	9.1
☐	**Microsoft 365 Copilot / Teams**	Connect IAS with Microsoft Entra ID; one Entra app per tier	9.2
☐	**Joule Studio**: your own skills and agents	Needs SAP Build Process Automation (plan build_default)	9.3
☐	**Joule for Consultants / for Developers**	Separate setups for SAP consultants and ABAP developers	10

7 Test before go-live

☐	You need...	In plain words / tip	Runbook
☐	**Login**: Joule opens without a second login	Use a private browser window	T01
☐	**Navigation**: "Open <a common app>"	Joule offers the right app	T02
☐	**Real data**: "Show my open purchase orders"	Live data, only what that user may see	T04
☐	**Not allowed**: same question as a user without the role	Joule must refuse or show nothing	T05
☐	**Usage shows up** in the Joule Analytics Center	`<joule-url>/analytics`	T10

Joule not working? Check these five first

- **No Joule icon?** User lacks the Joule role collection, or the product-side permission/catalog. Try a private window.
- **Login loops?** Products on different IAS tenants, SAML trust, or Global User ID not used.
- **Works for admins only?** The end-user role collection is not mapped to the users' IAS group.
- **Booster stops?** Work Zone not subscribed, or no IAS tenant linked to the global account.
- **"App not found"?** Work Zone content or roles not synced; run user provisioning.

Jargon in one line each

- **BTP**: SAP's cloud platform · **Subaccount**: a workspace in BTP · **Entitlement**: permission to use a service
- **IAS / IPS**: SAP's login service / user-sync service · **Global User ID**: one ID per person across SAP
- **Work Zone**: SAP's launchpad · **Booster**: setup wizard · **Formation**: Joule plus the products it connects
- **Role collection**: a bundle of BTP permissions · **Cloud Connector**: secure link from BTP to private systems
- **AI Units**: prepaid credits for premium AI · **SAP for Me**: SAP's customer portal
